## TRADITION

Fazzone professional ovens are completely made by hand, according to the ancient tradition of pizza oven construction.

## ECO-FRIENDLY

We only use natural and environmentally sustainable products, in accordance with the principles of the circular economy, thanks to the reintroduction of recovered materials from the same production waste into the various processing stages.

## ENERGY-SAVING

Technology that allows a high degree of heat retention with consequent energy savings. Our "heat tank" saves up to 75% in fuel.

# Fazzone artisanal ovens

Tradition, innovation, environmental sustainability, energy saving

## **MADE ENTIRELY BY HAND**

Fazzone professional ovens are completely made by hand, according to the ancient tradition of pizza oven construction. Our ovens are built entirely by hand without the use of formwork: this allows the bricks to be positioned so that they perfectly reflect the heat in the centre of the ground, in order to achieve the same temperature at all points. In addition, Fazzone ovens have very consistent temperatures and unrivalled consumption.

## **CIRCULAR ECONOMY: NATURAL PRODUCTS AND RECYCLING OF PRODUCTION WASTE**

Each stage of the production process is carefully monitored, using natural and environmentally sustainable products and in accordance with the principles of the circular economy, thanks to the reintroduction of materials recovered from the same production waste into the various processing stages. The bricks are handmade, produced with local clay and wood-fired. Lime, which in essence is fired stone, is the basis of our plaster, seasoned for two years to ensure the completion of its natural chemical processes. The dust and residues from the cutting of bricks are collected and reused, as are the ashes from local bakeries, which are used as a base to create insulating aggregates, allowing the creation of a top-quality cooking substrate.

## **FUEL SAVINGS OF UP TO 75%**

Fazzone ovens, in addition to the quality and eco-sustainability of our products, can count on an additional design and construction feature that makes them even more environmentally friendly, allowing high heat retention with consequent energy savings. Our "heat tank" saves up to 75% in fuel. Many people think that insulating the oven to the nth degree is the solution to lower consumption and higher performance. In reality, the pizza maker needs a constant release of heat over time, so that performance is as uniform as possible from the first batch to the hundredth. We have shown that at 490 degrees Celsius inside our ovens, the outer surface reaches just 37 degrees. 24 hours after shutting down the oven, it is still 290 degrees internally, and after 48 hours, 180 degrees.

## **A FAMILY TRADITION**

The Fazzone family has been building fireplaces and ovens for more than 40 years. In the last decade, they have specialised in professional pizza ovens, wood-fired, gas and soon also electric.

Professional, artisanal, environmentally sound, quality ovens.

Thanks to these characteristics, Fazzone artisan ovens are chosen by the best pizza makers throughout Italy and worldwide.
